## DETAILED ACTION

### *Drawings*

1. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 20. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 3-6, 8, 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujimaki, JP402284452A.

Fujimaki discloses memory module comprising: a board 1, a memory device 2 attached to the board 1, a heat dissipation means 3 arranged between the memory device and the board; the heat dissipation means includes an area of the board at which solder varnish 6 covering the board is removed, the heat dissipation means 3 includes a metal layer 13 connected to supply line potential; the metal layer includes a conductive trace; the metal layer 3, 13 includes the frame at the edge of the board with the heat sink 12.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2, 7, 9, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujimaki in view of Tanimura et al.

Fujimaki discloses the claimed invention including contact holes but does not disclose the heat-conducting paste and the conductive trace being meander-shaped. Tanimura

Art Unit: 2835

discloses heat dissipation means such as heat-conducting solder paste disposed between the component and the substrate (see col. 4, lines 39-40) and the conductive trace is meander-shaped (see Fig. 4, 5, 6). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use heat-conductive paste and meander-shaped traces as disclosed by Tanimura et al. in the device disclosed by Fujimaki et al. for efficient heat conduction and dissipation.

***Allowable Subject Matter***

7. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not show the tap extending from the frame for connecting the memory board to the socket of the motherboard.
